

# Protect Your Baby from HIV/AIDS

If you are HIV positive and do not know, you can pass the infection to your baby during pregnancy, birth or from breastfeeding.

Medicines can be given to HIV positive women to reduce the risk of passing HIV to their baby.

HIV tests are confidential, quick and easy to do.

All HIV tests are done at your hospital or the HISC in Thimphu or Phuentsholing.

***Get tested for HIV today!***
